

Timbarra BYOD Guide – Wi-Fi (MacOS)

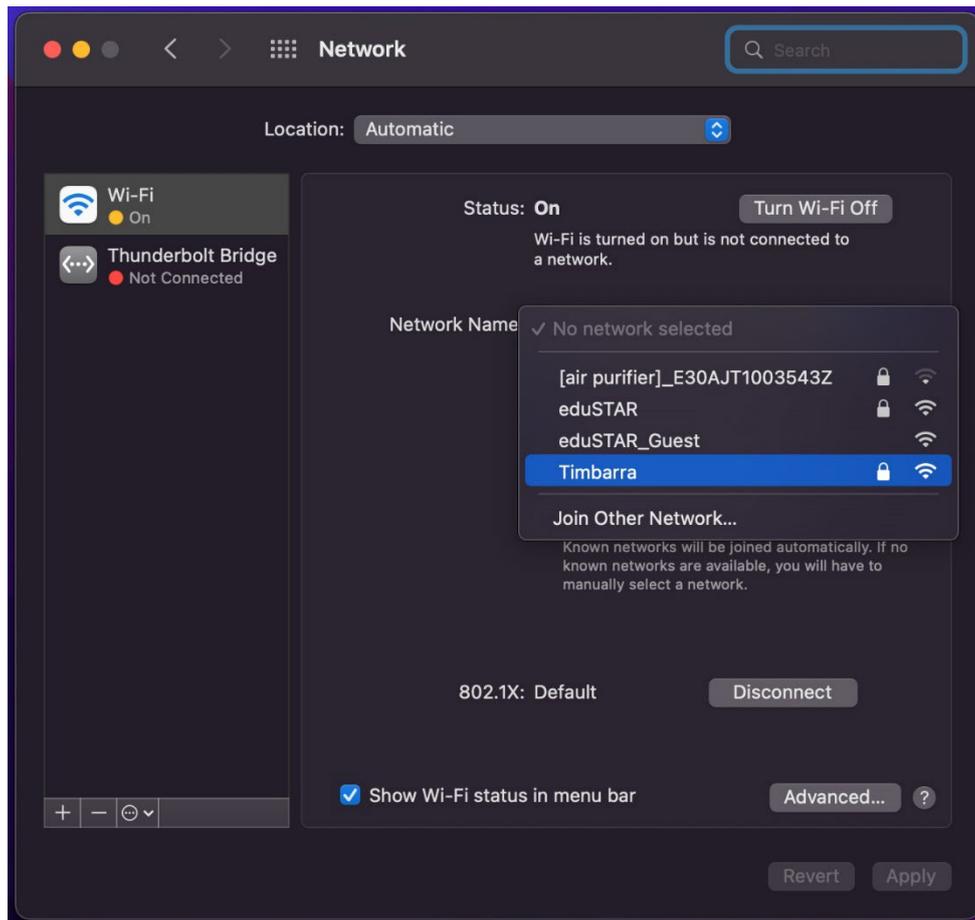

To connect to the school's Wi-Fi, you will need to know your Compass username and password. If you do not know your Compass login details, ask a teacher for your username, and to reset your Compass password.

Follow the steps below to connect to the Wi-Fi on a Macbook.

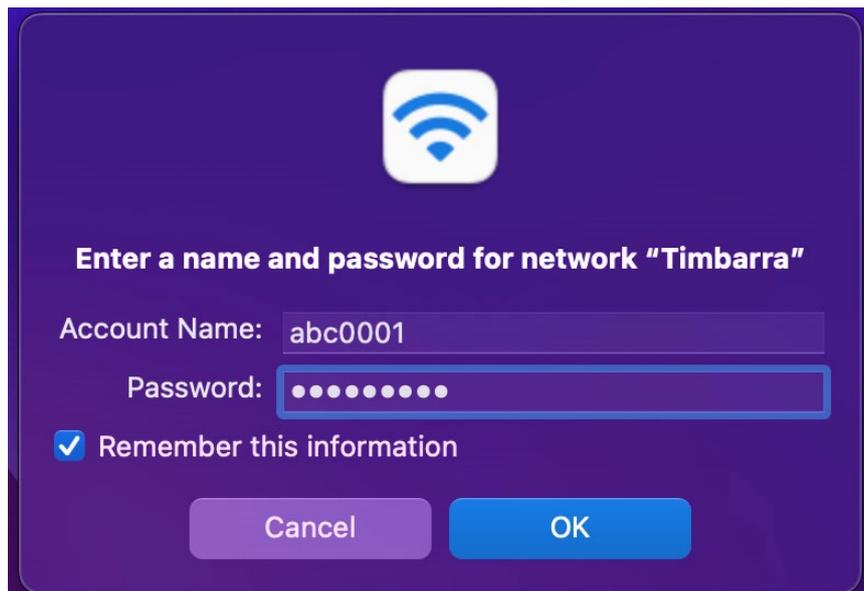

Step 1: Click on the Wi-Fi button at the top right of the screen and click **Network Preferences**.

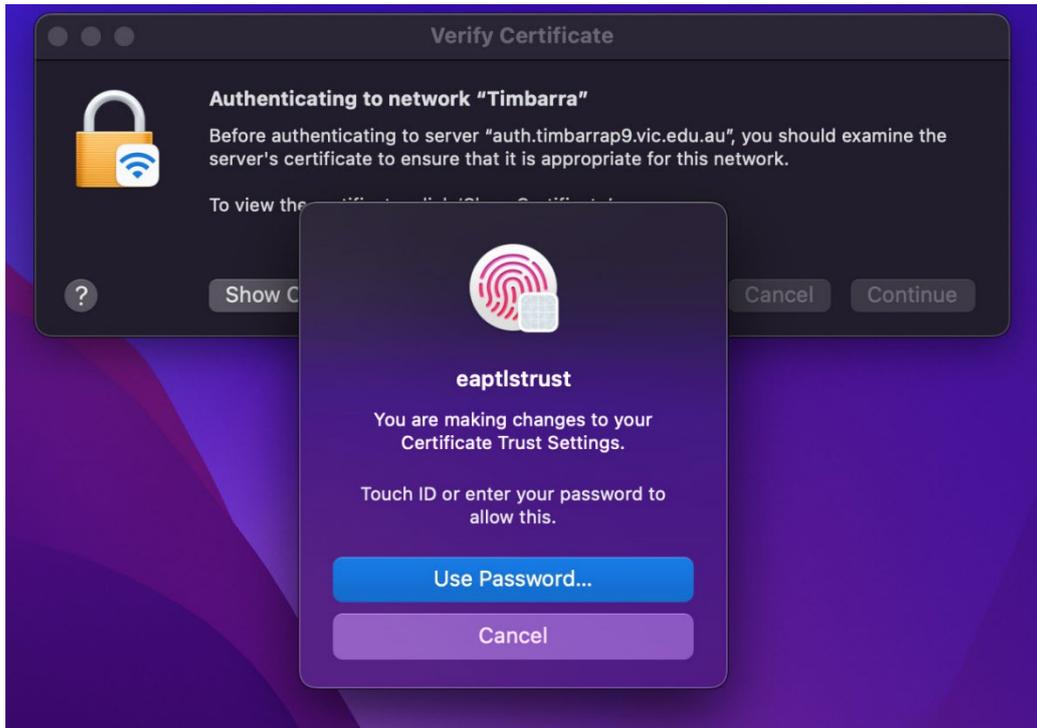

Step 2: Click on the dropdown menu next to **Network Name** and click **Timbarra**.

Step 3: Enter your compass username and password and click **OK**.

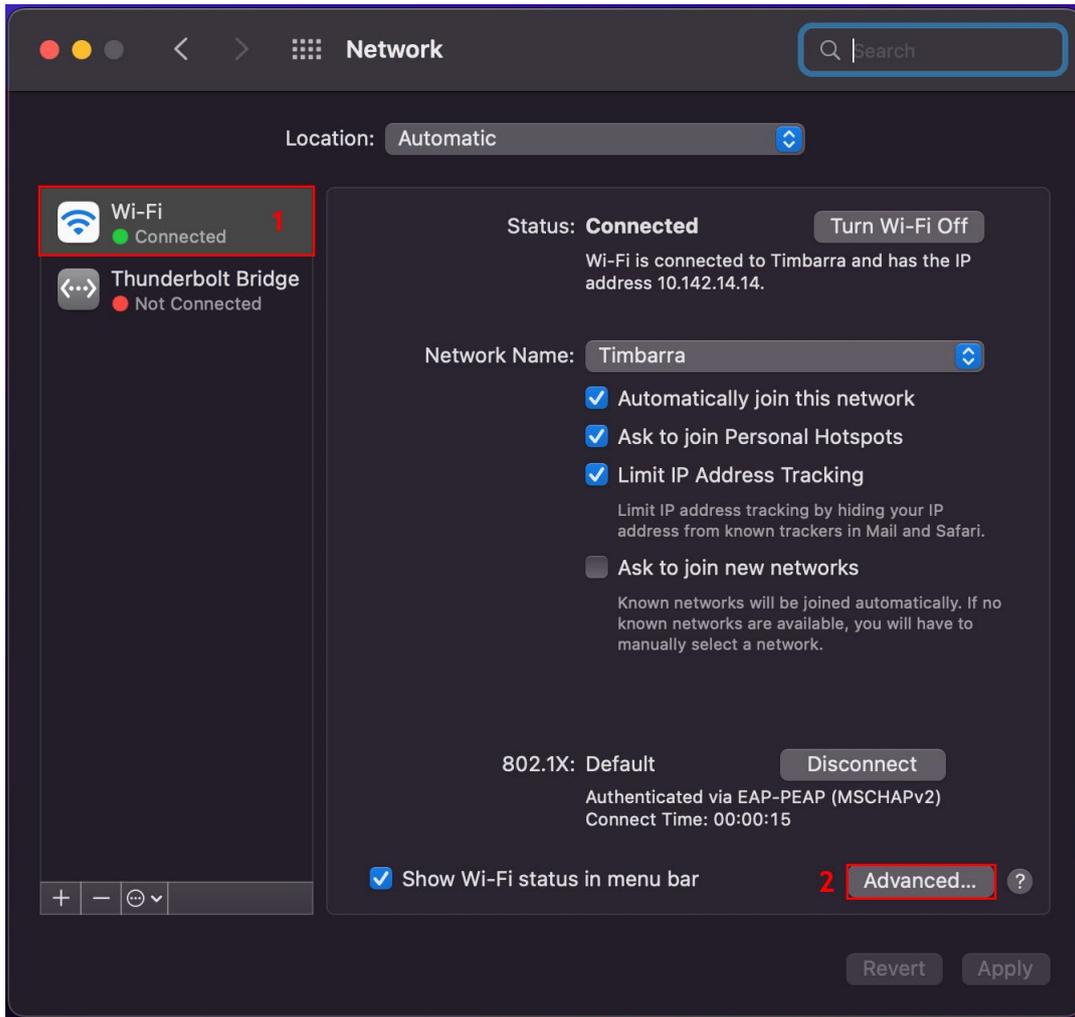

Step 4: In the **Verify Certificate** box, click **Continue**, and if prompted, enter your laptop password - **not your Compass password**.

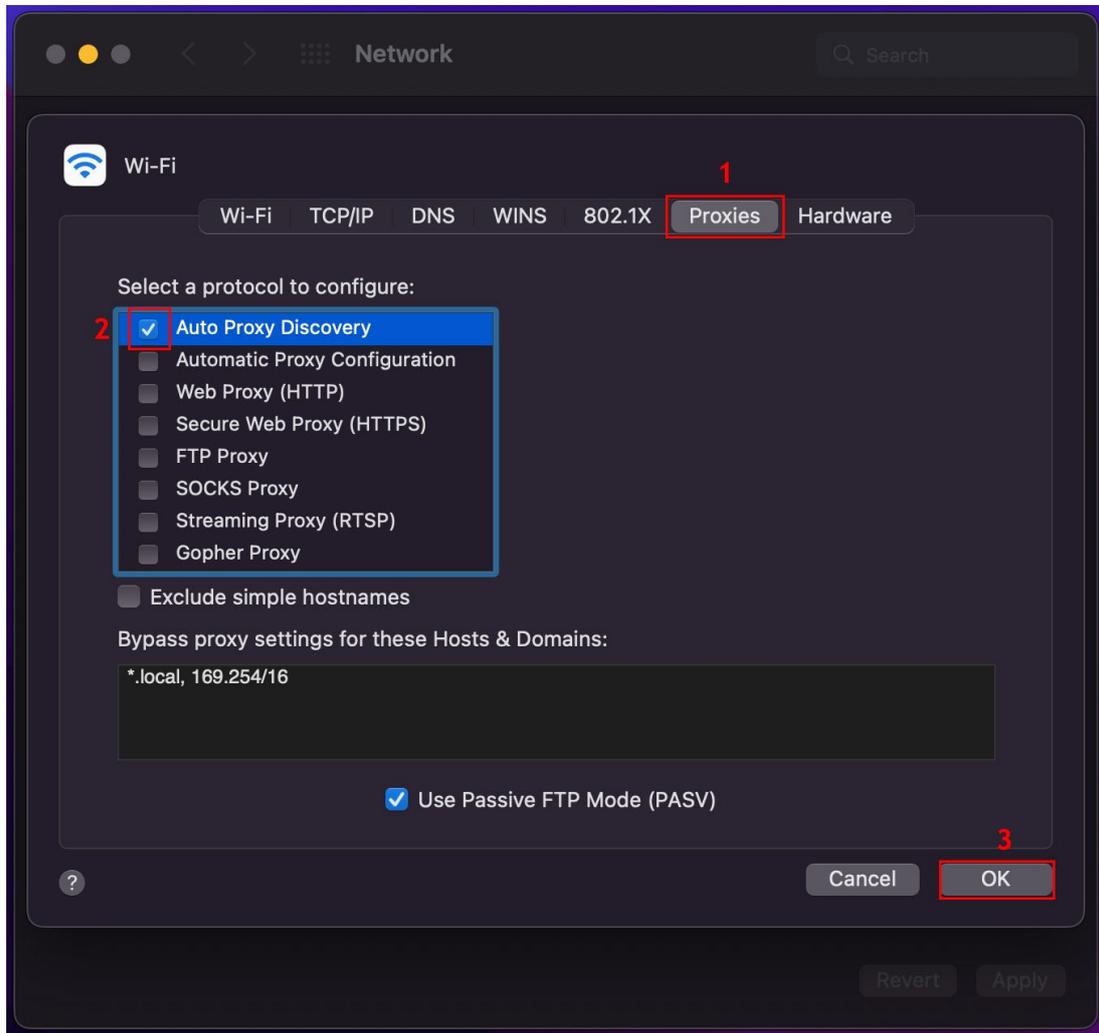

Step 5: You may be prompted to change your Compass password. If so, enter a new password, making sure that it is a minimum of 7 characters long, and meets at least 3 of the following requirements:

- Contains a lowercase letter (a-z)
- Contains an uppercase letter (A-Z)
- Contains a number (0-9)
- Contains a special character (!, @, #, \$, %, ^, & etc.)

Step 6: After a few seconds, the circle under **Wi-Fi** will turn green. Make sure that **Wi-Fi** is selected on the left and click on **Advanced**.

Step 7: Click on the **Proxies** tab and tick **Auto Proxy Discovery**. Click **OK** on the **Wi-Fi** screen and click **Apply** on the **Network** screen to save the changes. You can now close the **Network** window.

Congratulations, you are now connected to the Timbarra Wi-Fi!
